

## Step Seven: Operation Iterate

Now that you have evaluated your plan, you need to improve it by using feedback and what you've learned. It's a cyclical process- after evaluating your plan, you make changes and improvements. You might go through this cycle more than once to get the best possible solution.

The table below will help you work out which of your suggested improvements make sense to implement in your plan.

List each improvement from Operation Evaluate in the left-hand column. Discuss in your team and decide if you will make the change. Make sure you are clear on why or why not, and what the consequences will be. Once you have determined which changes to make, return to your plan and make the improvements. Then, you will need to return to the evaluation stage and re-evaluate your plan.

Suggested Improvement	Will you make the change? (Y/N)	Why/why not?	Consequences
